Sleep is as important to healthy life style as eating properly and exercising. On an average, a healthy adult requires just over eight hours of sleep at night. Yet, polls show that increasing numbers of people are suffering from sleep disorders or significant sleep loss (6 hours or less of sleep at night). A study shows that 29% of Indians went to sleep only after midnight and 61% slept for seven hours or less.

Sleep is crucial to maintaining your health. Without it, you increase your susceptibility to a wide range of health problems, including heart disease, stroke, diabetes, obesity and depression. Not sleeping enough can affect the immune system. The immune system works best when you are asleep. That is when natural killer cells are generated in the bone marrow. These killer cells help in protecting the body against viruses, bacteria and even cancer. The killer cells do not work properly when there is sleep deprivation.

For most of my life, I've been on a quest
To discover just who I might be,
Earnestly searching, day after day,
So desperate to recognize me.

I've felt moments of utter fulfillment
And moments I couldn't go on,
But I knew for the sake of my heart and my soul,
To succeed, I would have to be strong.
I've wanted so much to be happy,
To know what it was to feel peace,
And I thought if I finally felt sure of myself,
Then the pain and the struggles would cease.
