

III B. Tech II Semester Regular Examinations, April/May - 2019 DATA WAREHOUSING AND MINING

(Computer Science and Engineering)

	Tim	e: 3 hours Max.	Marks: 70
		 Note: 1. Question Paper consists of two parts (Part-A and Part-B) 2. Answer ALL the question in Part-A 3. Answer any FOUR Questions from Part-B 	
		PART –A	
1.	a)	What are the steps involved in KDD process.	[2M]
	b)	State why data preprocessing is an important issue for data warehousing and data mining.	[2M]
	c)	What is decision tree classifier?	[2M]
	d)	What is Bayesian Belief Networks?	[3M]
	e)	How association rules mined from large databases?	[3M]
	f)	Define density based method.	[2M]
		PART -B	
2.	a)	What is data Mining? Explain the differences between Knowledge discovery and data mining.	[7M]
	b)	Define Data Visualization & data transformation? Explain with examples.	[7M]
3.	a)	Write short notes on the following: (i) Data Preprocessing (ii) Data Discretization (iii) Concept Hierarchy	[6M]
	b)	 (i) Data Preprocessing (ii) Data Discretization (iii) Concept meratchy Given the following measurement for the variable age: 18, 22, 25, 42, 28, 43, 33, 35, 56, 28 Standardize the variables by the following: (i) Compute the mean absolute deviation for age. (ii) Compute the Z-score for the first four measurements. 	[8M]
4		Explain different elegation Techniques	[7]]
4.	a) b)	(i) What are over fitted models? Explain their effects on performance.(ii) What are the advantages and disadvantages of decision trees over other classification methods?	[7M] [7M]
5.	a) b)	Explain Naive Baye's Classification. Explain Baye's theorem. Develop an algorithm for classification using Bayesian classification.	[7M] [7M]
6.	a)	Discuss Apriori Algorithm with a suitable example and explain how its efficiency can be improved?	[7M]
	b)	write the algorithm to discover frequent item sets without candidate generation and explain it with an example.	[/M]
7.	a) b)	Describe K means clustering with an example.(i) What are the requirements for cluster analysis? Explain briefly.(ii) What is an outlier? Explain the types of outliers.	[7M] [7M]

III B. Tech II Semester Regular Examinations, April/May - 2019 DATA WAREHOUSING AND MINING

(Computer Science and Engineering)

Time: 3 hours

Max. Marks: 70

Note: 1. Question Paper consists of two parts (Part-A and Part-B)
2. Answer ALL the question in Part-A

3. Answer any FOUR Questions from Part-B

~~~~~~~~~~~~~

### PART-A

| 1. | a) | List the five primitives for specifying a data mining task.                                                                                                          | [2M]  |  |  |  |  |  |  |  |
|----|----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|--|--|--|--|--|--|--|
|    | b) | Write the strategies for data reduction.                                                                                                                             | [2M]  |  |  |  |  |  |  |  |
|    | c) | List the approaches for filling in the missing values.                                                                                                               | [2M]  |  |  |  |  |  |  |  |
|    | d) | What is pattern evaluation & correlation analysis?                                                                                                                   | [3M]  |  |  |  |  |  |  |  |
|    | e) | Define support and confidence in Association rule mining.                                                                                                            | [3M]  |  |  |  |  |  |  |  |
|    | f) | What is an outlier? Mention its applications.                                                                                                                        | [2M]  |  |  |  |  |  |  |  |
|    |    | PART -B                                                                                                                                                              |       |  |  |  |  |  |  |  |
| 2. | a) | What is data mining? Briefly explain the Knowledge discovery process.                                                                                                | [7M]  |  |  |  |  |  |  |  |
|    | b) | Describe the various descriptive statistical measures for data mining.                                                                                               | [7M]  |  |  |  |  |  |  |  |
| 3. | a) | Explain in detail about data pre-processing.                                                                                                                         |       |  |  |  |  |  |  |  |
|    | b) | What is the need of dimensionality reduction? Explain any two techniques for dimensionality reduction.                                                               | [7M]  |  |  |  |  |  |  |  |
| 4. | a) | Discuss K- Nearest neighbor classification algorithm and its characteristics.                                                                                        | [7M]  |  |  |  |  |  |  |  |
|    | b) | What is association and correlation? With an example describe classification and prediction.                                                                         | [7M]  |  |  |  |  |  |  |  |
| 5. | a) | State Bayes theorem and discuss how Bayesian classifiers work?                                                                                                       | [7M]  |  |  |  |  |  |  |  |
|    | b) | What are Bayesian classifiers? With an example, describe how to predict a class label using Naive Bayesian classification.                                           | [7M]  |  |  |  |  |  |  |  |
| 6. |    | A database has four transactions. Let min_sup=60% and min_conf=80%                                                                                                   | [14M] |  |  |  |  |  |  |  |
|    |    | TID date items_bought                                                                                                                                                |       |  |  |  |  |  |  |  |
|    |    | 100 10/15/2018 {K, A, B, D}                                                                                                                                          |       |  |  |  |  |  |  |  |
|    |    | 200 10/15/2018 {D, A, C, E, B}                                                                                                                                       |       |  |  |  |  |  |  |  |
|    |    | $300  10/19/2018  \{C, A, B, E\}$                                                                                                                                    |       |  |  |  |  |  |  |  |
|    |    | 400 $10/22/2018$ {B, A, D}                                                                                                                                           |       |  |  |  |  |  |  |  |
|    |    | i) Find all frequent items using Apriori & FP-growth, respectively. Compare the                                                                                      |       |  |  |  |  |  |  |  |
|    |    | efficiency of the two meaning process.                                                                                                                               |       |  |  |  |  |  |  |  |
|    |    | 11) List all of the strong association rules (with support 's' and confidence 'c')                                                                                   |       |  |  |  |  |  |  |  |
|    |    | matching the following meta-rule where X is a variable representing                                                                                                  |       |  |  |  |  |  |  |  |
|    |    | customers, and item 1 denotes variables representing items (e.g., "A", "B", etc.):<br>$Vx \in transactions, huvs(X item1) \land huvs(X item2) = huvs(X item2)[a, a]$ |       |  |  |  |  |  |  |  |
|    |    | $v_X \in \text{transactions, ouys}(X,\text{trans}) = \text{ouys}(X,\text{trans}) = -\text{ouys}(X,\text{trans})[s,c].$                                               |       |  |  |  |  |  |  |  |

| 7. a) | a) | What is Density based clustering? Describe DBSCAN clustering algorithm. |      |  |  |  |  |  |  |
|-------|----|-------------------------------------------------------------------------|------|--|--|--|--|--|--|
|       | b) | Describe how categorization of major clustering methods is being done?  | [7M] |  |  |  |  |  |  |

Describe how categorization of major clustering methods is being done? b)

# III B. Tech II Semester Regular Examinations, April/May - 2019 DATA WAREHOUSING AND MINING

(Computer Science and Engineering)

Time: 3 hours

Max. Marks: 70

Note: 1. Question Paper consists of two parts (Part-A and Part-B)

2. Answer **ALL** the question in **Part-A** 

3. Answer any FOUR Questions from Part-B

#### PART -A

| 1. | a)        | What is data mining?                                                                                                                                                                                                                                                               | [2M]     |  |  |  |  |  |  |
|----|-----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|--|--|--|--|--|--|
|    | b)        | How concept hierarchies are useful in data mining?                                                                                                                                                                                                                                 | [2M]     |  |  |  |  |  |  |
|    | c)        | List similarity measures.                                                                                                                                                                                                                                                          | [2M]     |  |  |  |  |  |  |
|    | d)        | What is rule classification?                                                                                                                                                                                                                                                       | [3M]     |  |  |  |  |  |  |
|    | e)        | List the techniques to improve the efficiency of Apriori algorithm.                                                                                                                                                                                                                | [2M]     |  |  |  |  |  |  |
|    | f)        | What is the objective function of the K-means algorithm?                                                                                                                                                                                                                           | [3M]     |  |  |  |  |  |  |
|    |           | PART -B                                                                                                                                                                                                                                                                            |          |  |  |  |  |  |  |
| 2. | a)        | Explain data mining as a step-by-step process of knowledge discovery. Mention the Functionalities of Data mining.                                                                                                                                                                  | [7M]     |  |  |  |  |  |  |
|    | b)        | What is data cleaning? Describe the approaches to fill missing values.                                                                                                                                                                                                             | [7M]     |  |  |  |  |  |  |
| 3. | a)        | Write a note on subset selection in attributes for data reduction.                                                                                                                                                                                                                 | [7M]     |  |  |  |  |  |  |
|    | b)        | Discuss briefly about data cleaning techniques.                                                                                                                                                                                                                                    |          |  |  |  |  |  |  |
| 4  | a)        | What is Decision tree? With an example briefly describe the algorithm for                                                                                                                                                                                                          | [7M]     |  |  |  |  |  |  |
| ч. | <i>u)</i> | generating decision tree.                                                                                                                                                                                                                                                          | [/141]   |  |  |  |  |  |  |
|    | b)        | What is prediction? Explain the various prediction techniques. Explain about Decision tree Induction classification technique.                                                                                                                                                     |          |  |  |  |  |  |  |
| -  | - )       | Describe the data algoritization process with a next diagram. How does the Neive                                                                                                                                                                                                   |          |  |  |  |  |  |  |
| 5. | a)        | Bayesian classification works? Explain                                                                                                                                                                                                                                             | [/]¥I]   |  |  |  |  |  |  |
|    | b)        | What is misclassification rate of a classifier? Describe sensitivity and specificity measures of a classifier.                                                                                                                                                                     |          |  |  |  |  |  |  |
| 6. |           | <ul> <li>Make a comparison of Apriori and FP-Growth algorithms for frequent item set mining in transactional databases. Apply these algorithms to the following data:</li> <li><b>TID</b> LIST OF ITEMS</li> <li><b>1</b> Bread, Milk, Sugar, TeaPowder, Cheese, Tomato</li> </ul> | [14M]    |  |  |  |  |  |  |
|    |           | 2 Onion, Tomato, Chillies, Sugar, Milk                                                                                                                                                                                                                                             |          |  |  |  |  |  |  |

Briefly describe the attribute selection measures for decision tree induction.</li> <li>b) Describe the criteria used to evaluate classification and prediction methods.</li> <li>a) What are Bayesian classifiers? With an example, describe how to predict a class label using Naive Bayesian classification.</li> <li>b) What is misclassification rate of a classifier? Describe sensitivity and specificity measures of a classifier.</li> <li>a) What is Association rule mining? Briefly describe the criteria for classifying association rules.</li> <li>b) Can we design a method that mines the complete set of frequent item sets without candidate generation? If yes, explain it with the following table:</li> <li><i>TID</i> List of items <ul> <li>001</li> <li>milk, dal, sugar, bread</li> <li>002</li> <li>Dal, sugar, wheat, jam</li> <li>003</li> <li>Milk, praeer, dal, sugar</li> <li>005</li> <li>Milk, paneer, bread</li> </ul> </li> </ul> |  |  |  |  |  |  |  |  |  |  |

- 7. a) Describe any one Hierarchical clustering algorithm.
  - gorithm. [7M] ssimilarity measures for interval-scaled [7M]
  - b) What is cluster analysis? Describe the dissimilarity measures for interval-scaled [7M] variables and binary variables.
